

THE AFFORDABLE COLOR CHANGER YOU CAN RELY ON

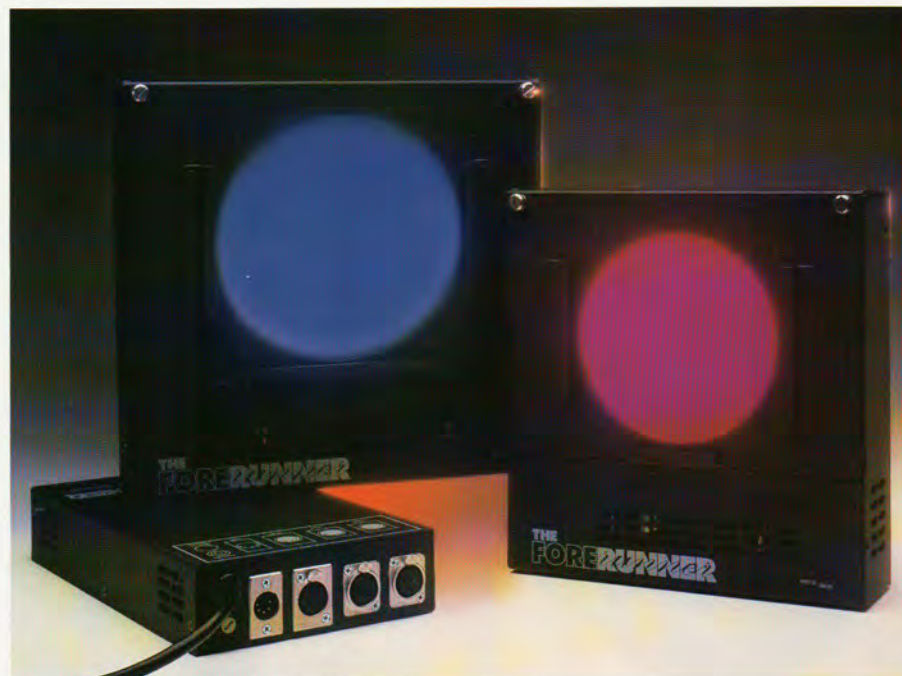

When your company is built on a reputation for unrivaled quality, expectations run high for every product you launch.

Introducing THE FORERUNNER™. An entry-level color changer that can take the heat.

THE FORERUNNER is the latest in a long line of scrolling color changers from Wybron, the company that invented them. Feature-for-feature, it is the most affordable color changer available. And it's the only one in its class backed by Wybron reliability.

THE FORERUNNER comes in 7 and 4-inch models. The 7-inch is designed to fit PAR 64s and most 6 and 8-inch ellipsoidals. The 4-inch FORERUNNER slides easily onto all Source Four and Shakespeare 600 lights, as well as compact ellipsoidals

“Market
affordability.
Wybron reliability.
The perfect
combination.”

Both models offer 16-frame color changing, with Wybron's signature Autoload™ system. No cumbersome toploading here. Just open the front of the unit, tape one end of the gelstring to the lefthand roller and push a button. The string rolls on automatically.

Powered by a 16-head PSU, every FORERUNNER has its own DMX address. And we've designed the head units to allow daisy chaining without signal loss - and without patching each chain line back to the power supply.

Unlike other color changers, THE FORERUNNER is compatible with

most competitor systems, so you can put your existing color changer inventories to use.

Like THE COLORAM II® and THE SCROLLER before it, THE FORERUNNER is always cool, quiet and durable. And it is the lowest-cost color changer we've ever built - with a price that's the same today as it will be tomorrow.

THE FORERUNNER. All the basics at an affordable price. And best of all, it's a Wybron.

GENERAL SPECIFICATIONS - THE FORERUNNER
